

ALPINE BIVY'S

Lachlan Gardiner

SOLO SHELTERS

The bivouac sack, or bivy as it is affectionately known, is a weatherproof cover for your sleeping bag. It is an ultralight, minimalist shelter for adventurers on fast and light missions, and an emergency shelter for backcountry expeditions.

Bivy's are great for those planning big pursuits where minimal weight, packability, and compact footprint size, are requisites for success.

Weekend explorers also value bivouacs for their hassle-free simplicity. They are easy to set up at night and pack down the next morning giving you more time on the trail. Furthermore, they offer an unparalleled sense of immersion in the environment. Your uninhibited view will elevate your impression of the grandeur of the mountains and the immediacy of the natural world.

When deciding whether a bivy is the right choice for your adventure, consider the impact of factors like condensation, bugs, the restrictive space, and the forecast. Once you know the type of adventure you wish to tackle and have considered your comfort tolerances you will easily be able to choose the right balance of features and performance that you need from your shelter.

Tips for bivy camping

Look for a protected site to set up camp. This will afford you some shelter from wind and the elements. Take care not to set up in a low-lying area where water is likely to pool.

Cinch the bivy's hood down around your face for shelter, but avoid breathing inside the bivy as this can cause condensation. Instead, consider packing a neck gaiter or balaclava as a lightweight face mask.

Ensure your pack has its own protection from damp conditions, use a backpack liner and maybe a rain cover too. Protect the gear you need to keep warm by storing it at the foot of your sleeping bag.

Protect your shelter and, cook a good distance away from your sleeping site. Check the forecast! And enjoy the lighter pack on your back.
